

# Dynatest A/S

We provide world-class, cost-effective, sustainable solutions that optimize pavement maintenance.

## Who we are.

**We are committed to providing the best pavement testing equipment and support while continually advancing state-of-the-art non-destructive pavement testing technology.**

### **The pavement industry's global partner.**

Dynatest is the pavement industry's global partner on pavement evaluation solutions. We develop, manufacture, and service equipment and software that defines the industry standard. With more than 40 years of experience, we deliver seamless 360° solutions based on innovative, market-leading expertise.

Our customers can expect us to be flexible and agile in the market to solve their challenges. Every customer and every project are unique. With our combined trio of services consisting of high-quality equipment, reliable software, and expert knowledge, we are able to create the best possible solution every time.

Knowledge is the very backbone of Dynatest and our know-how is one of our biggest assets. We are passionate about technology and pavement engineering and our employees are some of the most respected and trusted engineers and technicians in the business.

In collaboration with our highly skilled distributors, we operate in every corner of the world from our offices and production facilities in Ballerup, Denmark, and Gainesville, Florida, USA.

## Enabling a world that works

We have been in the industry for over 40 years. Dynatest equipment is operating in over 70 countries. We are proud to be a market leader in the field of pavement evaluation.

## Our values.

Our values are the core of our organization. They define how we do business and interact with our customers, partners, suppliers, and colleagues. Our three core values are innovation, partnership, and expertise. As we expand into new markets and face new challenges, these values are guiding us every step of our way. But we can not do it without skilled and passionate employees.

### Innovation.

Innovation is a driving force for Dynatest. We raise standards that push the pavement engineering industry forward. Through thorough R&D we provide world-class equipment, software, and service for our customers. Our pavement engineering equipment is currently in action across the globe – creating safer, more cost-effective, and efficient pavement infrastructure.

### Partnership.

We are trusted advisors for our customers. Our agents and our pavement engineers are the voice of the customers within Dynatest and stay close to them throughout the process of specifying equipment, software, and delivering after-sales services. Through our support, our customers can be sure they are making the best possible technical and economic decisions.

This level of customer focus is what makes our partnerships strong – customers invest in us and in return we are committed to investing in them.

### Expertise.

We have years of expertise in pavement engineering. Know-how is the foundation of our solutions and the key to optimizing pavement maintenance and pavement management. We must believe in our recommendations, so we go the extra mile to ensure solid data on behalf of our customers.

Our proven track record and countless cases ensure we are in command of your solution. When it comes to critical decisions, some of the biggest players in engineering put their faith in Dynatest.

### Skilled and passionate employees are key.

Our highly skilled employees are the core of Dynatest. We pride ourselves on our unique combination of in-house analytical expertise and practical, in-the-field capabilities that enable us to successfully perform many different types of projects and provide practical solutions for a wide array of customers.

## Pioneering the industry.

Dynatest was founded in 1976 by three innovative engineers who met at the Danish Technical University (DTU).

Since then, Dynatest has not only developed the world's first Falling Weight Deflectometer (FWD), but also the first Heavy Weight Deflectometer (HWD), and more recently the first FastFWD.

In the late 90s Dynatest entered the "mature" profiling market developing the Road Surface Profiler and in 2003 Dynatest purchased the profiling and friction divisions of KJ Law and updated the electronics and software producing the 6875, 1295 and 995 friction devices we offer today.

**This means that Dynatest is a 360° leading supplier of state-of-the-art non-destructive pavement testing technology.**

## We know how to help to save on pavement maintenance.

We have always been exploring new technologies, methods, and combinations of these within the pavement industry.

All the high-quality equipment from Dynatest is specially developed to measure load capacity, road profiles, smoothness, tracks, cracks, friction, etc. Our equipment also meet current standards and is designed to provide standardized data of the highest accuracy and repeatability making the output ideal for both project and network-level assessment.

Our user-friendly software is developed for data collection and processing, thorough analysis, reporting and presentation of measurement results.

With our equipment and software, you can plan long-term and thus intervene with preventive maintenance of all types of pavements. And thus optimize the road budget that is available for your road or runway.
